I sent reporter email explaining we were looking at a range of metals and other contaminants of concern and that we'd have results tomorrow.

Hullo Gabriel and thanks for reaching out,

Actually, our Region 8 office in Denver put out a statement on the incident earlier today, since the incident originated in the state of Colorado. I'm looping them into our e-mail thread right now.

Thanks, R.

Hello Mr. Gray my name is Gabriel with NBC Network News in Los Angeles. Would it be possible to get an update on the Animas River and how it is effecting your region and what the EPA feels may result from the million gallons of mine waste water that made its way into the Animas River in Colorado and is making its way south to New Mexico?

I understand that you are working on a release, would also be possible to get a copy of it? Thank you.
